
Guidance on the implications of *Groundwater protection: principles and practice (GP3)* on the refurbishment or redevelopment of petrol filling stations

GUIDANCE ON THE IMPLICATIONS OF GROUNDWATER PROTECTION:
PRINCIPLES AND PRACTICE (GP3) ON THE REFURBISHMENT OR
REDEVELOPMENT OF PETROL FILLING STATIONS

1st edition

April 2013

ENERGY INSTITUTE, LONDON

The Energy Institute is a professional membership body incorporated by Royal Charter 2003

Registered charity number 1097899

The Energy Institute (EI) is the chartered professional membership body for the energy industry, supporting over 16 000 individuals working in or studying energy and 250 energy companies worldwide. The EI provides learning and networking opportunities to support professional development, as well as professional recognition and technical and scientific knowledge resources on energy in all its forms and applications.

The EI's purpose is to develop and disseminate knowledge, skills and good practice towards a safe, secure and sustainable energy system. In fulfilling this mission, the EI addresses the depth and breadth of the energy sector, from fuels and fuels distribution to health and safety, sustainability and the environment. It also informs policy by providing a platform for debate and scientifically-sound information on energy issues.

The EI is licensed by:

- the Engineering Council to award Chartered, Incorporated and Engineering Technician status;
- the Science Council to award Chartered Scientist status, and
- the Society for the Environment to award Chartered Environmentalist status.

It also offers its own Chartered Energy Engineer, Chartered Petroleum Engineer and Chartered Energy Manager titles.

A registered charity, the EI serves society with independence, professionalism and a wealth of expertise in all energy matters.

This publication has been produced as a result of work carried out within the Technical Team of the EI, funded by the EI's Technical Partners. The EI's Technical Work Programme provides industry with cost-effective, value-adding knowledge on key current and future issues affecting those operating in the energy sector, both in the UK and internationally.

For further information, please visit <http://www.energyinst.org>

The EI gratefully acknowledges the financial contributions towards the scientific and technical programme from the following companies

BG Group	Nexen
BP Exploration Operating Co Ltd	Phillips 66
BP Oil UK Ltd	Premier Oil
Centrica	RWE npower
Chevron	Saudi Aramco
ConocoPhillips Ltd	Shell UK Oil Products Limited
EDF Energy	Shell U.K. Exploration and Production Ltd
ENI	SSE
E. ON UK	Statoil
ExxonMobil International Ltd	Talisman Energy (UK) Ltd
International Power	Total E&P UK Limited
Kuwait Petroleum International Ltd	Total UK Limited
Maersk Oil North Sea UK Limited	Valero
Murco Petroleum Ltd	World Fuel Services

However, it should be noted that the above organisations have not all been directly involved in the development of this publication, nor do they necessarily endorse its content.

CONTENTS

	Page
1 Introduction	6
1.1 Aim of the document	6
1.2 Audience	6
1.3 Legislation	7
1.3.1 Groundwater protection: principles and practice part 2 (GP3 Part 2)	7
1.3.2 GP3 Part 2 and petrol filling stations	8
1.3.3 Implications of GP3 Part 2 on the refurbishment or redevelopment of PFS	8
1.4 Summary	8
2 PFS construction and operation	9
2.1 Understanding PFS construction: what is the hazard?	9
2.2 Suction versus pressure systems	9
3 Preparing and reviewing the planning application	24
3.1 Feasibility of above ground versus below ground storage	24
3.2 Evidence that the redevelopment will maintain a low risk or significantly reduce an existing risk to groundwater	25
3.3 Evidence that the proposals comply with appropriate engineering standards	25
3.4 Evidence that effective management systems are, or will be, in place	26
3.5 Evidence that redevelopment does not bring the fuel storage nearer to any abstraction source or surface water (via groundwater baseflow) at risk	27
3.6 Summary	27
4 References	28
Tables:	
Table 1	Suction versus pressure systems 10
Table 2	Look-up table: Potential for accidental discharge of fuel from PFS and pollution prevention control measures 11
Table 3	Suggested data sources for appropriate engineering standards 26
Table 4	Suggested data sources for effective management systems 27
Figures:	
Figure 1	Potential fuel leak or spillage points at PFS with underground storage. 20
Figure 2	Typical leak mitigation measures on underground fuel system components 21
Figure 3	Typical spill mitigation measures on above ground fuel system components 22
Figure 4	Timeline summarising changes in PFS design and construction over time 23

ACKNOWLEDGEMENTS

This project was commissioned by the Energy Institute's (EI) Soil Waste and Groundwater Group (SWG) in cooperation with the EI Service Station Panel (SSP). The work was undertaken by the ARCADIS and ARTELIA Consultants project team: M. Edwards (ARTELIA), K. Baker (ARCADIS), M. Goldsworthy (ARTELIA) and D. Tuley (ARCADIS).

The project was steered by a joint EI and Environment Agency (EA) Steering Group.

The EI wishes to thank Clare Robertson, Simon Deacon and Tanya Bowell from the EA for their contribution to this training pack, and also record its appreciation of the work of the SWG and SSP members from the following companies/organisations:

Shell

ExxonMobil

BP

Retail Motor Industry Petrol/Petroleum Equipment Installers and Maintenance Federation

Rontec Watford Limited

The Energy Institute wishes to record its appreciation of the work carried out by the project team and also its gratitude for the valuable contributions made by the steering panel during the course of the project. In particular the EI would like to acknowledge Katy Baker as the principal author and express its thanks to her.
