ACKNOWLEDGEMENTS

The following members of the IP Soil Contamination Working Group have been associated with the development of this Code of Practice.

PCL Allen

Mobil Oil Co. Ltd.

PL Barlow

Shell UK Ltd.

DT Bushman

BP Oil (UK) Ltd.

R Crawford

Esso Petroleum Co. Ltd. Institute of Petroleum

J Hayes R Head

Texaco Ltd.

T Nunez-McNally BP Research Centre

RJ Watkinson

Shell Biosciences Laboratory

The Working Group wish to thank The Department of the Environment and National Rivers Authority for their comments which have been helpful in the development of this Code.

1

SCOPE

This Code of Practice describes the recommended procedure to investigate land for possible petroleum-based *contamination* and subsequent procedures to assess its relevance and any remedial measures deemed necessary.

Although hydrocarbons are the main products associated with oil industry sites, depending on the products stored, other chemicals such as organic leads and petroleum product additives may also be present.

For the purposes of this Code a contaminated site is defined as a site at which hazardous substances occur at concentrations above *background levels* and where assessment indicates they pose, or are likely to pose an immediate or long term *hazard* to human health or the environment. *Background levels* in this paper refer to ambient levels of a contaminant in the local area of the site under consideration.

The Code provides practical working guidelines identifying the stages of a site investigation, assessment of risks to health and the environment and the establishment where necessary of appropriate treatment criteria. In addition reference is made to responsible authorities who should be consulted during the investigation. The authorities are named for England and Wales, (in other countries equivalent authorities would need to be consulted).

Although the document does not aim to enable the Site Manager or Engineer to carry out a site investigation, it will provide an appreciation of the process of site assessment and *remediation* work.

It is envisaged that the document will be of particular interest to companies involved in the manufacture, storage, handling, sale, and use of petroleum products and to local authority departments with responsibilities for planning, environmental health and building control or land use.
