CONTENTS

	Page
Acknowledgements	vii
Foreword	viii
1 Introduction and scope	1
2 Corrosion and cathodic protection basic principles	3
2.1 Corrosion	3
2.2 Cathodic protection	3
2.3 Benefits of using CP	3
2.4 Limitations on using CP	4
3 Cathodic protection systems outline description	5
3.1 Sacrificial anode systems	5
3.2 Impressed current systems	6
3.3 Application to storage tanks (external surfaces) and buried pipework	6
4 Considerations associated with the application of cathodic protection to underground storage tanks and pipework	9
4.1 Evaluation	9
4.2 Electrical considerations	9
4.3 Continuity and isolation	11
4.4 Stray current interaction	12
4.5 Coatings	12
4.6 Summary	12
5 Cathodic protection system design	13
5.1 CP design criteria	13
5.2 Design considerations	13
6 Safety considerations	15
6.1 Installation activities	15
6.2 Safety considerations for CP systems	15

Contents Cont....	Page
7 Commissioning cathodic protection systems	19
7.1 General	19
7.2 Sacrificial anode systems	19
7.3 Impressed current systems	20
7.4 Handover documentation	20
8 Monitoring and maintenance of cathodic protection systems	23
8.1 General	23
8.2 Sacrificial anode systems	23
8.3 Impressed current systems	23
8.4 Records	23
Annex A - Corrosion mechanisms	25
Annex B - UST coatings	31
Annex C - Transformer rectifier specific requirements	33
Annex D - Glossary	35
Annex E - References	39

ACKNOWLEDGEMENTS

This publication was prepared at the request of the Institute of Petroleum's Service Station Panel by Stephen Barke (Corrpro Companies Europe Ltd.), Patrick Lydon (Penspen Ltd.) and Martin McTague (Ecotech (UST) Ltd.). It was subsequently reviewed and developed by representatives of the following companies and organisations:

Association of Forecourt Systems Contractors (AFSC)
Association of Petroleum and Explosives Administration (APEA)
Association of UK Oil Independents (AUKOI)
Berry & Co
BP
ChevronTexaco Ltd.
Conoco Ltd.
Environment Agency
Esso Petroleum Company Ltd.
Health & Safety Executive
John Dallimore and Partners
Kuwait Petroleum (GB) Ltd.
LP Gas Association
Petrol Retailers Association (PRA)
Petroleum Equipment Installers & Maintenance Federation (PEIMF)
Petroleum Enforcement Liaison Group (PELG)
Shell Global Solutions
Shell UK Ltd.
Terry Hedgeland, on behalf of the IP Electrical Committee
Tesco Stores Ltd.
TotalFinaElf UK Limited
United Kingdom Petroleum Industry Association (UKPIA)
Veeder-Root

The IP is particularly grateful for the contributions provided by John Dallimore and Terry Hedgeland.

FOREWORD

This publication has been produced by the Institute of Petroleum's Service Station Panel to provide guidance to those involved in the design, construction, operation and maintenance of petrol filling stations on the safe and effective use of cathodic protection to prevent the external corrosion of underground steel storage tanks and associated steel pipework. The guidance in this publication has been prepared to specifically address the use of cathodic protection with the earthing arrangements found at petrol filling stations in the UK.

Although it is hoped and anticipated that this publication will assist those involved in the provision of cathodic protection systems for petrol filling station and the operation of such sites, the Institute of Petroleum cannot accept any responsibility, of whatever kind, for damage or loss, or alleged damage or loss, arising or otherwise occurring as a result of the application of the guidance contained herein.

Suggested revisions are invited and should be submitted to the Technical Department, Institute of Petroleum, 61 New Cavendish Street, London W1G 7AR, UK.

INTRODUCTION AND SCOPE

This publication has been prepared principally to provide information for those involved in the design, construction, operation and maintenance of petrol filling stations (PFSs) on the safe and effective use of cathodic protection (CP) to prevent the external corrosion of underground steel storage tanks and associated steel pipework. In addition it is anticipated that this guidance will also be of use to those involved in ensuring that PFS operators meet their statutory requirements under relevant legislation.

Although it is possible to apply a CP system to the internal surface of an underground storage tank (UST) by the use of a sacrificial anode system, this publication is restricted to the provision of CP to the external tank surface.

Although this guidance has been prepared specifically for operators within the UK certain aspects may also be of use to those considering the installation of CP in other countries.

The guidance included in this publication refers to CP systems for both new underground steel tanks/steel pipework and existing underground steel tanks/steel pipework.

Cathodic protection methods can only be applied to USTs and associated pipework made from steel. This guidance is not therefore applicable to tanks and pipework made from non-metallic materials. Where

'storage tanks' and 'pipework' are referred to in this publication they should be taken as meaning those only made from steel. For an installation incorporating steel tank(s) and plastic pipework, it is appropriate to apply CP to the steel tank(s).

This publication is intended only to provide guidance on CP systems as a means of ensuring that petroleum products at a PFS are not released to the surrounding environment as a result of corrosion of underground steel storage tanks and steel pipework. Full details of other options available, and the risk assessment process that should be followed when considering them, are provided in *IP Guidelines for soil, groundwater and surface water protection and vapour emission control at petrol filling stations*. That publication also gives a review of relevant European and National legislation applicable to environmental protection.

One of the key factors that should be considered in the design, installation and maintenance of a CP system at a PFS is the impact that this will have on the existing electrical installation. Comprehensive information on the electrical installation at a PFS is provided in *APEA/IP Guidance for the design, construction, modification and maintenance of petrol filling stations* which should be read in conjunction with this publication.
