About the conference

This timely conference will explore the latest industry thinking, best practice, research and lessons learned and innovation with relevance to the management of major accident hazards associated with oil and gas assets.

Who should attend?

This conference will be of interest to oil & gas personnel with responsibilities in the fields of:
Asset Management, Technical Risk Analysis, HSE, Asset Integrity, Operations, Human Factors, Business Improvement and Operational Excellence.

About the Energy Institute and its technical activities

The Energy Institute (EI) is the professional membership body bringing global energy expertise together.

We're a unique network with insight built over a century and spanning the world of energy, from conventional oil and gas to the most innovative low carbon and energy efficient technologies.

We gather and share essential knowledge about energy, the skills that are helping us use it more wisely, and the good practice that keeps it safe and secure.

We articulate the voice of energy experts, taking the know-how of around 20,000 members from 120 countries to the heart of the public debate.

And we're an independent, not-for-profit, safe space for evidence-based collaboration, an honest broker between industry, academia and policy makers.

The EI is here for anyone who wants to better understand or contribute to the extraordinary energy system on which we all depend. For more information about the Energy Institute, please visit: **www.energyinst.org**

Our aim is to provide the energy industry with cost-effective, value-adding knowledge on key current and future issues.

How do we do this?

The Energy Institute undertakes a focused technical work programme that comprises original independent research and investigations, technical responses to legislation and regulation, workshops and seminars, to provide the international industry with information and guidance on relevant technical issues. Although some of this work is funded, a significant proportion is only achieved through the voluntary efforts of members from industry to whom the Institute is very grateful.

The technical work undertaken by the EI is defined by the Scientific and Technical Committee (STAC) and coordinated by a number of technical sub-committees supported by EI staff.

The results of the work are made available through our technical publications and events such as conferences and workshops. For the purpose of disseminating guidance and good industry practice as widely as possible, some publications have been made available to download for free.

In addition to the above work, the Technical staff facilitate and coordinate UK input into the work of national and international non-EI committees in organisations such as BSI, ISO and CEN.

If you do not find what you are looking for or have a technical enquiry, please contact the EI Knowledge Service team.

Abstract Topics

Leadership

Asset integrity/process safety Leadership; Competence assurance; Workforce involvement

Hazard Identification

Wells/blowout; Shipping collision; Fire/explosion and process containment; Rotating equipment/turbine failure; Helicopter collisions; Structural failure

Risk Management

Wells/blowout, Shipping collision, Fire/explosion and process containment, rotating equipment/turbine failure, Helicopter collisions, Structural failure; Procedures, Standards and practices; Emergency preparedness; Inspection and maintenance; Work control, Permit to Work and task risk management; Contractor and supplier management

Measurement/Review and Improve

Incident reporting and investigation; Audits; Procedures, Standards and practices; Emergency preparedness; Inspection and maintenance; Work control, Permit to Work and task risk management; Contractor and supplier management

General guidelines

Submit your abstract using the enclosed form and email to aberdeen@energyinst.org by 1 May 2019
The abstract proposals must be a maximum 500 words in length. All proposals should be written and presented in English. No additional attachment will be accepted
Please summarise the author's experiences and qualifications of this abstract by submitting their career biography within the abstract form, which cannot be more than 250 words in length. CV will not be accepted
Do not include title or author names in the body of the abstract
Please note that, if accepted, your abstract proposal may be published, as submitted, in conference information media, including the Energy Institute website
We expect authors to credit all sources used in their writings and not to represent work of others as their own
The Energy Institute will not accept inclusion of commercial trade names, company logos, or text that is commercial in tone in the paper title, text, or slides
Under no circumstances can a submitted abstract be changed once it has been submitted
The EI will not cover speaker expenses
You must obtain necessary clearance and travel approval from your management

Copyright: All authors of papers presented at the conference will be required to complete and submit a copyright release form to Energy Institute or submit the copyright exemption form where applicable.

Changes, cancellations and withdrawals: The Energy Institute and the Programme Board consider an accepted abstract as a commitment to present. If extenuating circumstances prevent the author from making the presentation, it is that author's obligation to find an alternate presenter and notify Energy Institute in writing as soon as possible.

What happens next? The programme Board will review the abstract on the basis of their alignment to the conference themes, creditability and relevance. The Energy Institute will inform those who have submitted abstracts on whether their abstract has been accepted.
