- Safe Systems of Work

COVERAGE AND RESOURCE

Service is provided from eight UK-wide Training and Rescue Centres including our site in Aberdeen. To maintain the quality and consistency of service, our centres support each other as needed. This approach means we have a flexible workforce who can respond quickly to requirements.

To manage demand, we:

- Liaise with customers to fully understand requirements, and whether the needs are long or short term.
- Review local internal resources to match with demand
- If demand exceeds the local resources available and is short-term, we will work with our other seven UK training centres to free up extra resources to support.
- If demand is long-term, we would potentially increase the size of our operator pool. All our operators, managers, directors, and other employees put heart and soul into delivering a positive experience to our customers.

OUR EMPLOYEES

One of the areas that truly differentiates us is the quality of our trainers/operators. They have the real-life skills and expertise of working in hazardous environments. They undertake a lengthy induction and training programme which is constantly reviewed and enhanced through their careers.

Our trainers and operators are all directly employed as we believe in employing the right people for the role.

Competence is assured through a combination of:

- Formal assessment
- Peer review
- On the job evaluation
- Annual performance/competence appraisal.

Our training system, profiles key competencies by role and by person, and tracks individuals against a required skillset. This training matrix ensures that required works are planned and key skills never fall out of date.

The system also allows those deploying an operator to ensure that the team has all the right competencies to for the task.
